

FOR IMMEDIATE RELEASE

Radiall offers expanded frequency range up to 50 GHz

January 2015 - Radiall, a global leader in design, development and manufacturing of innovative interconnect solutions, offers an expanded range of product solutions with operating frequencies up to 50 GHz. This range includes 2.4mm precision connectors, bench test cable assemblies and coaxial switches.

Radiall's 2.4mm precision connectors are ideal interfaces to meet the stringent demands in today's communication. This line includes both male and female connectors compatible with 2.4mm rigid coaxial airline cables. These 2.4mm connectors are 50 Ohms precision connectors and are designed to operate at extremely high microwave frequencies up to 50 GHz. The connector range is complemented by 2.4mm coaxial male and female terminations featuring high electrical performance and a small form factor.

The expanded TestPro product range features a new 50 GHz bench test cable that sets the standard for high performance measurement cables when flexibility and phase and loss stability is required. Different from standard cable assemblies, TestPro 2 is specially designed for applications that require repeated connect/disconnect test procedures and the ability to withstand strenuous movement and continuous flexing.

A new range of 50GHz coaxial switches fitted with 2.4mm connectors are now available in two versions, SPDT & DP3T with 50GHz external loads. Designed according to the RAMSES modular concept, these various part number configurations are perfectly suited for high frequency equipment especially in "Q" and "V" bands requiring excellent performance relays and reliability.

For further information on this range, please contact a Radiall sales representative, Distributor or visit www.radiall.com

###

About Radiall

Radiall is a global manufacturer of leading-edge interconnect solutions. The company offers an extensive range of RF coaxial connectors and cable assemblies, coaxial switches, fiber optic and microwave components, multipin connectors and more. Radiall has sales offices and subsidiaries throughout the world, R&D in the U.S., Europe and China, along with manufacturing facilities strategically located in the U.S., Mexico, India, and China.
