

**FOR IMMEDIATE RELEASE**

## **Radiall introduces omnidirectional antennas for harsh environments**

October 2015 - Radiall, a global leader in design, development and manufacturing of innovative interconnect solutions, is proud to offer high performance 2.4 & 5 GHz omnidirectional antennas for harsh environments. The ruggedized design is suitable for military, industrial or hot spot installations where reliable communication is required.

These robust antennas are tested per MIL-STD-810G and can resist vibration, immersion (IP68 rate), temperature and mechanical shock, which allows them to be used for either fixed or on the move applications. The new modular design optimizes performance in gain, radiation and frequency for wireless network applications operating in the 2.4 GHz and 5 GHz bands. By offering the perfect combination of high electrical performance and robustness, these new antennas provide reliable coverage for wireless communication.

These wireless omnidirectional antennas are compatible with the Radiall mounting bracket (MD15-006) for a quick and safe installation over a mast or on a wall.

For further information on Radiall's new omnidirectional antennas please contact a Radiall sales representative, Distributor or visit [www.radiall.com](http://www.radiall.com)

###

### **About Radiall**

Radiall is a global manufacturer of leading-edge interconnect solutions. The company offers an extensive range of RF coaxial connectors and cable assemblies, coaxial switches, fiber optic and microwave components, multipin connectors and more. Radiall has sales offices and subsidiaries throughout the world, R&D in the U.S., Europe and China, along with manufacturing facilities strategically located in the U.S., Mexico, India, and China.
