

**FOR IMMEDIATE RELEASE**

## **iEPX: Easy Integration Meets Lighter Connection**

December 2016 - Radiall, a global leader in design, development and manufacturing of innovative interconnect solutions, has expanded the EPX™ series to now offer, iEPX, a new weight optimized EPXB2 disconnect shell with an integrated strain relief.

The numerous benefits in this innovative solution, provides aircraft manufacturers a way to easily reduce the overall cost of the aircraft.

**Lightweight Solution:** iEPX offers more than 40% weight savings in comparison to a standard EPXB2 shell equipped with a backshell which helps to reduce the overall cost of ownership of the aircraft.

**Simplified Design:** iEPX enables customers to stock only one part in strain relief configuration, with no removable parts other than the backshell itself. The innovative design of iEPX helps to prevent FOD and reduces the cost of stock.

**Quick and Easy Installation:** No additional part needs to be fixed to the connector when strain relief is required. The unique T-shape also facilitates rear wiring. With only one backshell to fix and press-in on the integrated strain relief, iEPX is simple to terminate and ultimately helps to reduce assembly costs.

iEPX addresses challenges of aircraft manufacturers and is the perfect lightweight and cost saving connector solution with a quick rear termination.

For further information on Radiall's new iEPX please contact a Radiall sales representative, Distributor or visit [www.radiall.com](http://www.radiall.com)
