

FOR IMMEDIATE RELEASE

Introducing the CO30CAN Evaluation Kit

November 2024 — Radiall, a global leader in the design, development and manufacturing of innovative interconnect solutions has developed the CO30CAN, a contactless power and data connector.

The CO30CAN is an evaluation kit that provides 30W data and power transmission without the need for a physical connection at different distances. This product uses non-electrically conductive materials, allowing more movement, unlimited mating cycles and hermetically sealed housing. Complex mechanics have been removed, making the CO30CAN suitable for high stress environments, avoiding deterioration and elements like dust.

This maintenance-free alternative to traditional connectors is appropriate for renewable energies, medical equipment, industrial connected devices and smart factory.

For more information on Radiall's CO30CAN, please contact a Radiall sales representative or visit www.radiall.com.
