

**FOR IMMEDIATE RELEASE**

## **FIBER OPTIC BACKSHELLS**

January 2018 – Radiall is a global leader in design, development and manufacturing of innovative interconnect solutions has expanded the EPX® series with the launch of new Fiber Optic backshells for EPXB1 and EPXB2 disconnect connectors.

The new backshells provide **easy and secure wiring** for EWIS and out of the box applications. With 2.36 inches of cables protected beyond the insert front face, FO backshells keep cables straight and prevent any bending. This new solution helps to avoid damage to Fiber Optic cables.

Capitalizing on its expertise in rectangular connectors and understanding the need for **weight and space savings**, Radiall designed backshells with lightweight materials. The new FO backshells are only 11 g for EPXB1 version and 20 g for EPXB2. At only 1.57 in. long, they can be installed where space is limited.

Designed with easy to assemble parts (clamps and bushings), the backshells are wired with either ARINC802-MGL or ARINC802-MGL-1DS cables. There is no tape needed to stiffen and protect the cables, which ultimately **saves time**.

These new backshells, completes Radiall's modular EPX® range and meets customers' needs for a secure, cost saving solution, suitable for use with a limited number of components.

For further information on Radiall's new EPX® please contact a Radiall sales representative, Distributor or visit [www.radiall.com](http://www.radiall.com)
