

FOR IMMEDIATE RELEASE

Introducing Fortero

February 2025— Radiall, a global leader in the design, development and manufacturing of innovative interconnect solutions has developed Fortero, an ultra-rugged connector for ribbon fiber connections.

Derived from a high-speed rail connector with a proven track record of enduring high-vibration, impact and extreme environmental conditions, Fortero has been reimagined to meet the critical needs of modern defense operations. Its robust design delivers unparalleled durability, providing a secure connection even when exposed to extreme conditions such as crushing forces, shock, vibration or exposure to water, dirt and dust.

Originating from the Latin word for “strong,” Fortero embodies reliability and resilience. This new connector goes beyond the requirements of the MIL-DTL-38999 standard, bringing ribbon fiber capability to an entirely new level of ruggedness and versatility.

Beyond defense, Fortero is also ideal for use in space, industrial and telecommunication sectors, delivering high-performance solutions wherever durability and dependability are paramount.

For more information on Radiall's Fortero, please contact a Radiall sales representative or visit www.radiall.com.
