

FOR IMMEDIATE RELEASE

TESTPRO VNA Series

January 2018 – Radiall is a global leader in design, development and manufacturing of innovative interconnect solutions has developed TestPro VNA test cables specially designed to withstand the rigors of test lab use and production testing for 50 ohm communications systems.

Radiall's TestPro VNA series provides customers with a reliable, ruggedized solution for Lab and Production Vector Network Analyzer testing. Available in either 50 GHz & 67 GHz option, these cables offer cost-leading alternatives to original OEM VNA cable solutions.

The VNA series of test cables have a maximum phase and loss change guaranteed. This key parameter is essential because amplitude and phase variation following VNA calibration causes inaccurate S Parameter measurements. The braided stainless steel armoring surrounding the coax provides a rugged, self-locking, flexible cable with a flex life exceeding 50,000 cycles.

TestPro VNA cable assemblies offer extremely precise phase and amplitude stability when flexed and provide extreme accuracy and long lasting intervals between re-calibration. These VNA cable assemblies are available as single cable or phase matched pairs and are delivered in three standard lengths of 25, 38 and 48 inches.

For further information on Radiall's new VNA please contact a Radiall sales representative, Distributor or visit www.radiall.com

About Radiall

Radiall is a global manufacturer of leading-edge interconnect solutions. The company offers an extensive range of RF coaxial connectors and cable assemblies, coaxial switches, fiber optic and microwave components, multipin connectors and more. Radiall has sales offices and subsidiaries throughout the world, R&D in the U.S., Europe and China, along with manufacturing facilities strategically located in the U.S., Mexico, India, and China.
