1

Slide onto the cable the heatshrink and the ferrule.
Strip the cable. Shift the dielectric on the inner conductor of the cable to 1 mm, and leave it in position.
Fan the braid.
Cut the foil.

2

Slide the clamp nut onto the crimp sleeve.
Slide sub-assembly under the braid.
Slide ferrule over the braid against clamp nut (In direction F)
Crimp the ferrule with crimping tool R282.293.000 + dies R282.235.013 (Hex 6.48).

3

Remove the dielectric of cable, if necessary remove dielectric remains on the inner conductor of the cable.
Clean the face of the dielectric. Mount the insulator against crimp sleeve.

4

Slide the center contact onto the cable inner conductor against insulator.
Crimp center contact with the crimping tool 282.291 and the positioner R282.589.207 (selector on position n°8).
After crimping the central contact, realign thereof in the axis of the cable prior to mounting in the connector body.

5

Screw sub-assembly into the connector body.
(recommended coupling torque: 370N.cm)
Slide the sleeve over the ferrule and heatshrink it in place.

NOTE:

The cable must be clamped at 30 cm maxi from the crimping area of the connector.

The nut must be tightened at the specific torque after clamping.
