

FOR IMMEDIATE RELEASE

EPXB2 Bulkhead for Disconnect Panel Sealing Applications

January 2016 - Radiall, a global leader in design, development and manufacturing of innovative interconnect solutions, has expanded the EPX™ series to now offer the EPXB2 Bulkhead receptacle. The EPXB2 Bulkhead provides permanent sealing between pressurized and non-pressurized areas, in a disconnect application.

Offering the same modularity as the EPX™ series, the EPXB2 Bulkhead receptacle is fully intermateable with all EPXB2 plugs and uses the same broad range of contacts and accessories. Featuring a large range of Bulkhead inserts and a modular design, EPXB2 Bulkhead can optimize density and provide a very competitive solution.

The EPXB2 Bulkhead design offers time savings when terminating connectors due to the wide range of existing EPX™ crimp and PC tail contacts. Signal, power, Quadrax and fiber optics insert arrangements and user-friendly features (front release/rear removable) also help facilitate maintenance on bulkhead connectors.

Qualified according to EN4644, EPXB2 Bulkhead is an extension of EPX™ shells and provides air leakage (16cm³/h) and higher altitude immersion (55,000 feet) than EPXB inserts. Utilizing the same proven technology as the EPX™ series, EPXB2 Bulkhead receptacles provide easy and economical integration in the aircraft BOM.

Expanding its limits- EPXB2 Bulkhead will continuously evolve with the launch of new insert arrangements in upcoming months.

For further information on Radiall's new EPXB2 Bulkhead receptacle please contact a Radiall sales representative, Distributor or visit www.radiall.com
