

FOR IMMEDIATE RELEASE

Radiall chooses Ze-Watt to develop the use of electrical and hybrid vehicles for its employees

November 28th, 2016 – Ze-Watt offers companies and employees the opportunity to adopt a mobility without any CO2 emission, by offering a charging service for electrical vehicles at the workplace. As part of its approach to promote environmentally responsible habits among its employees, Radiall, a global manufacturer of leading edge interconnection solutions, has chosen to rely on Ze-Watt solutions. This partnership results in the installation of charging stations for electric and hybrid vehicles (two-wheeled vehicles, cars) at Radiall's production sites in Château-Renault (Touraine) and Voreppe (Isère), at the beginning of November.

An innovative and environmentally responsible approach

Ze-Watt offers companies and organizations **an all-inclusive offer which includes installation and the management of the recharging stations as well as all the services and the maintenance related to the infrastructure**. The working process is very simple: employees register on Ze-Watt's website, and then receive a badge to identify them prior to reloading their vehicles. The amount of energy consumed is directly debited from their account with Ze-Watt for a price equivalent to the electricity the French company, EDF, sells to private households. This means, Radiall does not benefit in any way when offering its employees the possibility to benefits from energy at a very competitive price. The company gives Ze-Watt the entire management of these new services.

A new step toward the factory of the future for Radiall

Partnering with Ze-Watt for the installation of this innovative service is part of the transformation project implemented at Radiall, which is designed to **reinforce its initiatives in order to reduce its environmental impact**.

“Among the axes of our Radiall 2025 transformation project, the factory of the future aims to inject the use of new technologies into our practices and to ensure our production sites are more connected and more respectful of the environment” explains Philippe Dubreuil, in charge of the Industrial Operations and the Factory of the Future project. “At both our facilities in Touraine and in Isère, our 850 employees now have new alternatives of their choice for their vehicles and they can act as active contributors in our transformation.”

This deployment is part of a long-term transformation project initiated by Radiall, and in line with its CSR policy (Corporate Social Responsibility) “Better Connected” policy launched last September.

“We are delighted to accompany Radiall in this phase of evolution towards the factory of the future. As many companies, Radiall has well understood that the use of fossil fuels must be reduced, and that this involves promoting alternatives such as the use of electromobility. Everyone is concerned: future customers, suppliers, potential new employees... Millennials, in particular, is very attentive to the commitments companies undertake in this field” concludes Eric Gaigneux, President and co-founder of Ze-Watt.

Radiall and Ze-Watt plan to strengthen this partnership in the coming years. The implementation on these two facilities of the Radiall Group will be followed by an analysis of the employees' uses, which is the first step to a deployment on the other facilities of the Radiall Group, or even to its foreign subsidiaries.

###

About Ze-Watt

Founded in April, 2015, this start-up from Toulouse (France) offers companies and their employees an all-inclusive offer of reloading services for electrical vehicles on the workplace. Installed on the companies' parking, the charging stations give the opportunity to employees who work at more than 40km from their house and/or who don't have access to a charging station next to their house, to benefit of a direct charging. Among Ze-Watt customers, are big companies such as Radiall, Safran, Thales, Assystem or the CNES as well as medium-sized companies and organizations. For more information: ze-watt.com

About Radiall

Radiall is a global manufacturer of leading-edge interconnect solutions. The company offers an extensive range of interconnect components for high reliability electronic applications.
