

FOR IMMEDIATE RELEASE

QuickFusio™: A miniature connector for cabin interiors and EWIS applications

June 2016 - Radiall, a global leader in design, development and manufacturing of innovative interconnect solutions, extends its product range with a new miniature connector range, the QuickFusio™ series. To meet the challenges aerospace customers face and respond to market requirements, the QuickFusio™ series is available in two versions, for either cabin or EWIS applications.

QuickFusio

- This connector offers the perfect balance between extreme competitive cost and performance needed in pressurized environments, especially in cabin applications

QuickFusio+

- Qualified in accordance to EWIS standard, the QuickFusio+ connector meets even more stringent requirements and is suitable for both pressurized and non-pressurized environments

The entire QuickFusio™ series is optimized to meet customer expectations in term of competitive price positioning. Due to the unique mating mechanism which enables quick mating and the use of standard SAE-AS-38999 contacts in QuickFusio™ inserts, the overall cost is reduced.

The revolutionary shape of the QuickFusio™ series combines the geometry of a square and a circle. This unique design makes this innovative solution compatible with any type of wiring combination and is easy to install due to the Radiall Touch - one finger mating technology. It also ensures compatibility with standard SAE-AS-38999 size 11 accessories.

Extremely compact, QuickFusio is 20% lighter and 40% smaller than the competition which eliminates wasted space and reduces the overall weight. QuickFusio is only 20 grams per pair when equipped with size 22 contacts.

Combining high performance with competitive costs and simple wiring, this lightweight, tool less and compact connector is the perfect solution for major commercial aerospace and defense OEMs.

For further information on Radiall's new QuickFusio™ series, please contact a Radiall sales representative, Distributor or visit www.radiall.com
