## SUBMINIATURE SPNT UP TO 40 GHz

SMA - SMA 2.9- QMA

PART NUMBER SELECTION

Radiall's R591 coaxial subminiature switches have a typical operating life exceeding 25 million cycles; Providing excellent RF performance, repeatability, and a guaranteed life of 10 million cycles, which makes switches ideal for Automated Test Equipment (ATE) and other measurement applications. These subminiature switches are also an excellent choice for Mil/ Aero applications due to their small size, light weight, and outstanding shock and vibration handling capabilities.

Example of P/N: R591302420 is a SP4T SMA up to 6 GHz , normally open, 12 Vdc with TTL driver and solder pins.

SERIES PREFIX

## RF CONNECTORS

3: SMA up to 6 GHz
7: SMA up to 26.5 GHz
8: SMA 2.9 up to $40 \mathrm{GHz}{ }^{[6]}$
E: QMA up to $6 \mathrm{GHz}{ }^{[5]}$
TYPE
0: Normally open
2: Latching, global reset
6: Latching, separated reset ${ }^{[1]}$

## ACTUATOR VOLTAGE

2: 12 Vdc
3: 28 Vdc

## NUMBER OF POSITIONS

4: 4 positions
6: 6 positions

## OPTIONS

0 : Without option
1: Positive common
2: With TTL driver ${ }^{[2,3 \& 4]}$
3: With suppression diodes
4: With suppression diodes and positive common

## ACTUATOR TERMINALS

0: Solder pins
5: Micro-D connector

## Notes

1. Available with "solder pins" models only.
2. Polarity is not relevant to application for switches with TTL driver.
3. Suppression diodes are already included with TTL option.
4. Available with "normally open" models only.
5. The QLF tradermark (Quick Lock Formula ${ }^{\oplus}$ ) standard applies to QMA and QN series and guaranties the full intermateability between suppliers using this tradermark. Using QLF certified connectors also guarantees the specified level of RF performance.
6. Connector SMA2.9 is equivalent to "K connector ${ }^{\circledR ",}$, registered trademark of Anritsu.

## SPNT USB UP TO 40 GHz

SMA - SMA 2.9

Utilizing Radiall's proven and patented RAMSES concept, our team of experts and engineers integrated a mini-USB terminal on SP6T and SP8T switches for simplified use especially in test \& lab applications.

Featuring an easy-to-integrate design, USB Coaxial Switches are delivered with a 1 meter long USB cable for power supply and switch drive. A soft front panel is provided to control the switches but commonly used software programming platforms such as Visual Basic, C\#, C++, LabVIEW and VEE are also compatible.

Example of P/N: R573F11601 is a non-terminated SP6T SMA up to 26.5 GHz , Normally Open, 5 Vdc, Indicators with a mini USB port.

## USB Series

## APPLICATION NOTE

## USB coaxial switch as cascade

You can use as many USB switches in cascade as you want. Each product is recognized by its automatic affectation to the ComPort and in order to differentiate them, each product has its own serial number which can be read by the software.

In order to provide power supply ( $5 \mathrm{~V} / 420 \mathrm{~mA}$ ) and drive as many switches as you want with your computer, you will need a hub USB which can provide same power as a classic USB port of the computer ( $500 \mathrm{~mA} / 5 \mathrm{~V}$ ) or a PCI expansion card USB (if it is a desktop).

## APPLICATION EXAMPLE

## BEFORE

AFTER

DC power from a power supply and wires to provide power to PF Paths

Control with computer

## GRAPHICAL USER INTERFACE WITH MORE THAN ONE PRODUCT

- Every product has its own serial port. To control manually you can also open many soft front panel.
- Each product has its own serial number and different communication port.
- The user has also the possibility to manage the control automatically using LabView drivers provided or using Vb.net, C++, C\# with DLL provided also.

## SPNT TERMINATED \& NON-TERMINATED UP TO 50 GHz

SMA - SMA 2.9-2.4 MM - QMA - DIN 1.6 / 5.6

Radiall's R573 and R574 multi-throw coaxial switches are offered in many configurations (over 40,000 possible combinations) including terminated and non-terminated options. Radiall offers reliable products, with shorter delivery times and competitive pricing. Excellent typical RF performance make RAMSES switches ( 40 GHz ) ideal for Automated Test Equipment (ATE) and other measurement applications. These switches are suitable for defense, industrial, instrumentation and telecommunication applications.
Example of P/N: R574453605 is a terminated SP6T SMA up to 18 GHz , Latching, Self Cut-Off, 28 Vdc, Indicators and male 25 pin D-Sub connector.

## RAMSES Series

## GENERAL SPECIFICATIONS

Type 2, 3, 4 and 5:
Latching models have a RESET pin which commands the reset of all positions. This command should be used before switching from one position to another. If not, two positions will be set at the same time.

Note: During the RESET operation the global current is: the nominal operating current multiplied by the number of positions.
Type 8, 9:
Latching models with AUTOMATIC RESET are available; these products have an internal SET/RESET circuit which automatically resets all the non-selected positions and sets the desired position. This option simplifies the use of latching switches by suppressing the RESET command in switching sequence.

An electronic circuit supplies successively groups of 2,3 or 4 actuators, in order to limit the maximum current. The current with this option is the total current of 2,3 or 4 reset coils in the same time (see table below).

Example: During the AUTOMATIC RESET operation, at $28 \mathrm{Vdc}, 4$ position switch has a temporary consumption of only 250 mA , during 40 ms maximum.

## SPNT UP TO 12.4 GHz - RAMSES CONCEPT

## N-BNC - TNC

Radiall's R573 and R574 multi-throw coaxial switches are offered in many configurations (over 40,000 possible combinations), including terminated and non-terminated options. Radiall offers reliable products, with shorter delivery times and competitive pricing. Excellent typical RF performance make RAMSES switches ( 12.4 GHz ) ideal for Automated Test Equipment (ATE) and other measurement applications. These switches are suitable for defense, industrial, and telecommunication applications.

Example of P/N: R573103600 is a SP6T N up to 12.4 GHz , Normally Open, 28 Vdc , and solder pins.

## Notes

I.C.: Indicator contact / S.C.O. : Self Cut-Off / A.R. : Auto Reset

Standard products are equipped with negative common

1. These models are already equipped with suppression diodes
2. Latching BCD driver enables also a global reset through driver code 0000 (see BCD logic coding page 1-13)
3. Available only up to 6 positions
4. Model "3" only
5. Available only for type 0,1,2 and 3
6. Available only with type 0,1,8 and 9
7. Polarity is not relevant to application for switches with TTL driver
8. 8 to 12 positions are available only up to 8 GHz
9. From 8 to 12 positions, this option is only available with type $0,1,8$ and 9
10. From 8 to 12 positions, this connector is only available without $50 \Omega$ termination
11. For precisions see availabilty of options chart page 5-27

## RAMSES Series

## GENERAL SPECIFICATIONS

Type 2, 3, 4 and 5:
Latching models have a RESET pin which commands the reset of all positions. This command should be used before switching from one position to another. If not, two positions will be set at the same time.

Note: During the RESET operation, the global current and the nominal operating current are multiplied by the number of positions.

Type 8, 9:
Latching models with AUTOMATIC RESET are available; these products have an internal SET/RESET circuit which automatically resets all the non-selected positions and sets the desired position. This option simplifies the use of latching switches by suppressing the RESET command in switching sequence.

An electronic circuit supplies successively groups of 2,3 or 4 actuators, in order to limit the maximum current. The current with this option is the total current of 2,3 or 4 reset coils in the same time (see table below).

Example: During the AUTOMATIC RESET operation, at $28 \mathrm{Vdc}, 4$ position switch has a temporary consumption of only 250 mA , during 40 ms maximum.

## COAXIAL SPNT - ACCESSORIES <br> PRINTED CIRCUIT BOARD INTERFACE CONNECTOR

A printed circuit board interface connector (ordered separately) has been designed for easy mounting on terminals
For SPnT model R573 and R574 series: Radiall part number: R599 906000 for 3 to 6 positions, R599 908000 for 8 positions, R599 900000 for 10 positions, and R599 902000 for 12 positions.

( $\varnothing 0.8$ [0.031] metallized holes, double side tracks)

( $\varnothing 0.8$ [0.031] metallized holes, double side tracks)

## R599900000

( $\varnothing 0.8$ [0.031] metallized holes, double side tracks)

## Accessories SPnT \& Electrical Schematics

## Mounting Bracket

Two different metal brackets have been designed for an easy mechanical mounting of our SPnT switches with a circular flange for customer installation. These brackets must be ordered separately and assembled according to our recommended process on the Technical Data Sheets.

## MODEL WITH SCREWS (R599320000)

## Notes

All dimensions are in millimeters [inches].
For assembling process please see Technical Data Sheet.

GENERAL TOLERANCES: $\pm 0.5 \mathrm{MM}[0.02]$

## Notes

All dimensions are in millimeters [inches].
This model can also be mounted on our SPnT switches with a square flange.
For adhesive bonding process please see Technical Data Sheet.

FOR MODELS WITH CONNECTORS SMA, QMA, SMA 2.9, 2.4 MM, DIN 1.6/5.6

## Titanium Series

## HIGH PERFORMANCE MULTIPORT SWITCHES

SPNT UP TO 40 GHz

Radiall's TITANIUM switches are optimized to perform at a high level over an extended life cycle. With outstanding RF performance, and a guaranteed insertion loss repeatability of 0.03 dB over a life span of 2.5 million switching cycles, Radiall's TITANIUM switches are a perfect solution for automated test and measurement equipment, as well as signal monitoring devices.
Example of P/N: R514F73617 is a SP6T SMA up to 26.5 GHz , Latching, Indicators, Self cut-off, Auto-Reset, 24 Vdc and HE10 receptacle.

## ELECTRONIC POSITION INDICATORS

The electronic position indicators use photo-MOS transistors, which are driven by the mechanical position of the RF paths moving elements. The circuitry consists of a common which can be connected to an output corresponding to a selected RF path. If one or several RF paths are closed, the corresponding indicators are connected to the common. The photo-MOS transistors are configured for AC and/or DC operation. The electronic position indicators require the supply ( 20 to 32 VDC ) to be connected to pin 1 and ground connected to pin 15.

## Pin number Function

2 Indicator Common

4 Indicator RF path 1

6 Indicator RF path 2

8 Indicator RF path 3

10 Indicator RF path 4

12 Indicator RF path 5

14 Indicator RF path 6

## Notes

Ways 1 and 4 are not connected for SP4T switches.

## Titanium Series

## TYPE 7: WITH TTL (OPTION "2") / WITHOUT TTL (OPTION "1") \& INDICATORS

Each RF path can be closed by applying ground or TTL "High" for option 2 to the corresponding "drive" pin. In general, except for Make-Before-Break drive, all other RF paths are simultaneously opened by internal logic.

Mating cable connector

Standard drive option "1":

- Connect pin 15 to ground
- Connect pin 1 to supply (+20 VDC to +32 VDC)
- Select (close) desired RF path by applying ground to the corresponding "drive" pin (Ex: apply ground to pin 3 to close RF path 1)
- To select another path, ensure that all unwanted RF path "drive" pins are disconnected from ground (to prevent multiple RF path engagement), then apply ground to the "drive" pin which corresponds to the desired RF path
- To open all RF paths, ensure that all RF path "drive" pins are disconnected from ground. Complete the operation by applying ground to pin 16

TTL drive option " 2 ":

- Connect pin 15 to ground
- Connect pin 1 to supply (+20 VDC to +32 VDC)
- Select (close) desired RF path by applying TTL "High" to the corresponding "drive" pin (Ex: apply TTL "High" to pin 3 to close RF path 1)
- To select another path, ensure that all unwanted RF path "drive" pins are in TTL "low" position (to prevent multiple RF path engagement), then apply TTL "high" to the "drive" pin which corresponds to the desired RF path
- To open all RF paths, ensure that all RF path "drive" pins are in TTL "Low" position. Complete the operation by applying TTL "High" to pin 16

## Break-Before-Make:

Open the undesired RF path for at least 15 minutes (minimum), then close the new RF port

## Make-Before-Break:

Ensure that the previously selected RF path "drive" is connected to ground (or TTL "High" for option "2"), then close the new RF path

## Notes

Ways 1 and 4 are not connected for SP4T switches.

## Titanium Series

TYPICAL OUTLINE DRAWING

## Notes

All dimensions are in millimeters [inches].
Ways 1 and 4 are not connected for SP4T switches.

## Titanium Series

## POWER RATING CHART

This graph is based on the following conditions:

- Ambient temperature: $+25^{\circ} \mathrm{C}$
- Sea level
- V.S.W.R.: 1 and cold switching

## DERATING FACTOR VERSUS VSWR

The average power input must be reduced for load V.S.W.R. above 1:1.

Notes
Ways 1 and 4 are not connected for SP4T switches.

## HIGH PERFORMANCE MULTIPORT SWITCHES

SPNT TERMINATED UP TO 40 GHz

Radiall's PLATINUM series switches are optimized to perform at a high level over an extended life cycle. With outstanding RF performance, and a guaranteed insertion loss repeatability of 0.03 dB over a life span of 10 million switching cycles, Radiall's PLATINUM series switches are a perfect solution for automated test and measurement equipment, as well as signal monitoring devices.

Example of P/N: R594873427 is a SPnT SMA 2.9 up to 40 GHz, Latching with Indicators, Self cut-off, Auto-Reset, TTL driver and HE10 connector.

## Platinum Series

## ELECTRONIC POSITION INDICATORS

(This option is not available with type 4)
The electronic position indicators use photo-MOS transistors, which are driven by the mechanical position of the RF paths moving elements. The circuitry consists of a common which can be connected to an output corresponding to selected RF path. If one or several RF paths are closed, the corresponding indicators are connected to the common. The photo-MOS transistors are configured for AC and/or DC operation. The electronic position indicators require the supply ( 20 to 32 VDC ) to be connected to pin 1 and ground connected to pin 15.

## Pin number Function

2 Indicator Common

4 Indicator RF path 1

6 Indicator RF path 2

8 Indicator RF path 3

10 Indicator RF path 4

12 Indicator RF path 5

14 Indicator RF path 6

## Notes

Ways 1 and 4 are not connected for SP4T switches.

## Platinum Series

## DRIVING THE SWITCH

Each RF path is driven independently, and can be closed or open by applying ground to the corresponding "open" or "close" pin.

TYPE 4: WITHOUT TTL AND WITHOUT INDICATOR

Switch connector

Mating cable connector

## Standard drive:

- Connect pin 15 to ground
- Connect pin 1 to supply (+20 VDC to +32 VDC)
- Select desired RF path by applying ground to the corresponding "close" pin (Ex: ground pin 3 to close RF path 1)
- To open desired RF path connect ground to the corresponding "open" pin (Ex: ground pin 4 to open RF path 1)
- To open all RF paths, first ensure that all RF path "close" pins are disconnected from ground, then to complete the operation, connect pin 16 to ground

## Make-Before-Break:

Make-Before-Break switching can be accomplished by closing the new RF path before opening the previously selected RF path. To complete the operation, close the new RF port for at least 15 minutes (minimum), then open the previously selected RF port.

## Notes

Ways 1 and 4 are not connected for SP4T switches.

## Platinum Series

## TYPE 7: WITH TTL (OPTION "2") / WITHOUT TTL (OPTION "1") \& INDICATORS

Each RF path can be closed by applying Ground or TTL "High" for option 2 to the corresponding "drive" pin. In general, except for Make-Before-Break drive, all other RF paths are simultaneously opened by internal logic.

Standard drive option " 1 ":

- Connect pin 15 to ground
- Connect pin 1 to supply (+20 VDC to +32 VDC)
- Select (close) desired RF path by applying ground to the corresponding "drive" pin (Ex: apply ground to pin 3 to close RF path 1)
- To select another path, ensure that all unwanted RF path "drive" pins are disconnected from ground (to prevent multiple RF path engagement), then apply ground to the "drive" pin which corresponds to the desired RF path
- To open all RF paths, ensure that all RF path "drive" pins are disconnected from ground, then complete the operation by applying ground to pin 16

## TTL drive option "2":

- Connect pin 15 to ground
- Connect pin 1 to supply (+20 VDC to +32 VDC)
- Select (close) desired RF path by applying TTL "High" to the corresponding "drive" pin (Ex: apply TTL "High" to pin 3 to close RF path 1)
- To select another path, ensure that all unwanted RF path "drive" pins are in TTL "Low" position (to prevent multiple RF path engagement), then apply TTL "High" to the "drive" pin which corresponds to the desired RF path
- To open all RF paths, ensure that all RF path "drive" pins are in TTL "Low" position, then complete the operation by applying TTL "High" to pin 16

## Break-Before-Make:

Open the undesired RF path after 15 minutes (minimum), then close the new RF port.

## Make-Before-Break:

Ensure that the previously selected RF path "drive" is connected to ground (or TTL "High" for option "2"), then close the new RF path.

## Notes

Ways 1 and 4 are not connected for SP4T switches.

TYPICAL OUTLINE DRAWING

SMA 2.9 CONNECTORS

Notes
All dimensions are in millimeters [inches]. Ways 1 and 4 are not connected for SP4T switches.

## Platinum Series

## POWER RATING CHART

This graph is based on the following conditions:

- Ambient temperature: $+25^{\circ} \mathrm{C}$
- Sea level
- V.S.W.R.: 1 and cold switching

## DERATING FACTOR VERSUS VSWR

The average power input must be reduced for load V.S.W.R. above 1:1.

## OPTIONAL FEATURES

EXAMPLES OF DEDICATED APPLICATION OPTIONS

SPnT with flat ribbon cable for easy installation with limited space.

SPnT models can be fitted with external loads (up to 50 GHz ) for an easy maintenance of equipment.

SP3T used for a military application with sequential access and severe environmental characteristics.

Thermal vacuum SPnT up to 50 GHz designed based on our expertise in Space. For more detailed information, see page 7-18 to 7-20.

7P6T switch for a Custom Matrix Switch (4P3T) with 4 Input ports and 4 Output ports configured for 3 transmission systems and one redundancy channel $(\mathrm{N}+1$ : $N$ type) for example.

Unterminated SP3-6T with 9 pins D-sub connector instead of solder pins.

[^0]:    Notes

    1. Compatible with 2.54 mm pitch double row and HE10 connector.
    2. Available with "solder pins" models only.
[^1]:    Notes

    1. Connector SMA 2.9 is equivalent to "K connector", registered trademark of Anritsu.
    2. Polarity is not relevant to application for switches with TTL driver
